

The graph displays the power consumption of a system over time. The y-axis represents Power in Watts (W), ranging from 0 to 14. The x-axis represents Time, spanning from January 2023 to April. The power starts at approximately 6W in early January, rises to a peak of nearly 14W in late January, and then shows a general downward trend with significant fluctuations. It reaches a minimum of about 0W in mid-March and then begins to rise again, ending at approximately 5W in April.

The line graph illustrates the energy consumption in kWh over time from January 2023 to April 2023. The y-axis represents Energy (kWh) ranging from 0.00 to 0.30. The x-axis represents Time, with labels for Jan 2023, Feb, Mar, and Apr. The energy consumption starts at approximately 0.15 kWh in early January, rises to a peak of about 0.32 kWh in late January, then drops to around 0.20 kWh in early February. It remains relatively stable around 0.20 kWh until mid-February, then decreases to about 0.10 kWh in early March, reaches a low of 0.00 kWh in mid-March, and finally rises to approximately 0.12 kWh by early April.

Time	Energy (kWh)
Jan 2023 (Start)	0.15
Jan 2023 (Mid)	0.25
Jan 2023 (End)	0.32
Feb (Start)	0.29
Feb (Mid)	0.20
Feb (End)	0.20
Mar (Start)	0.17
Mar (Mid)	0.10
Mar (End)	0.07
Apr (Start)	0.00
Apr (Mid)	0.09
Apr (End)	0.12
